SUMMARY

Data Analyst with an MCA from Chandigarh University, experienced in turning raw data into clear, actionable insights using SQL, Python, and Excel. Skilled at building visualizations and dashboards with Tableau, Matplotlib, and Seaborn to make data easy to understand and act on. Comfortable working with Pandas and NumPy for day-to-day data cleaning and analysis, with a strong eye for spotting trends and patterns. Motivated to bring a practical, problem-solving approach to a data analyst role and help teams make smarter, data-backed decisions.

EDUCATION

Master of Computer Application

Chandigarh University

07/2024 – 06/2026

Bachelor of Computer Application

Indira Gandhi National Open University

07/2019 – 06/2023

Grade : 66.57%

SKILLS

Excel | SQL | Tableau | Python | Numpy | Pandas | Seaborn | Matplotlib | Git & Github

CERTIFICATES

Data Analyst Job Simulation — OneRoadmap (Excel)

Data Analyst | July 2026

- Cleaned and standardized a 5000+ row retail sales dataset (UrbanKart) in Excel, resolving 150 duplicate records, 120 city name spelling variants, and 60 missing region values with 100% accuracy against evaluator benchmarks.
- Diagnosed and documented 6 distinct data quality issues (inconsistent date formats, currency prefixes, negative/zero quantities, missing values, city naming variants) and applied rule-based logic to remove invalid records while preserving data integrity.
- Delivered data-driven answers to 3 executive-level business questions on regional revenue contribution, month-on-month growth momentum, and sales channel performance, achieving 100% accuracy on all 7 quantitative metrics (region revenue, MoM revenue trend, channel share).
- Authored an executive memo recommending against discontinuing the lowest-revenue sales channel (Marketplace, 29.4% share), correctly identifying that revenue share alone was a misleading metric and highlighting growth trend as the decisive factor.

PROJECTS

Sales and Customer Dashboards (Tableau)

02/2025 – 02/2025

Data Analyst

- Designed and developed two interactive dashboards to analyze sales performance and customer trends for stakeholders including sales managers and executives.
- Sales Dashboard: Provided insights on sales metrics, trends, and product performance across two years, including key KPIs (sales, profits, quantity) and weekly trend analysis.
- Customer Dashboard: Delivered insights into customer behavior, including customer segmentation, distribution, and top 10 customers by profit.
- Incorporated dynamic filters and interactivity for easy data exploration, enabling stakeholders to drill down by product and location.
- Ensured user-friendly navigation between dashboards with year-over-year comparison capabilities.
